## Software Engineer, @FindYourBasis

*[July 2018-present]*  
mybasis.com

5th employee and 2nd engineer. Basis is a new type of support system that fits seamlessly into your routine. Connect with a real person who is trained to help you feel better.

## Software Engineer, @threadloom

*[October 2016-July 2018]*  
threadloom.com

2nd employee. Built Threadloom image search. Converted the Threadloom SRP into an SPA using vanilla JavaScript. Convinced the team to pivot the newsletter experiment into a product, built the automation and alerting infrastructure, and built the connective tissue between the microservice and SendGrid. Led the product development of List Builder, a GDPR-compliant modal that captures consent for the newsletter product.

## Software Engineer, @Tuitionio

*[July 2015-October 2016]*  
tuition.io

3rd engineer. I shipped the redesigned Tuition.io platform in 5 months. I built the functionality on which the entire application is based – linking student loans – by working with multiple financial data aggregation APIs.

## Software Engineer, @Rush\_Tera

*[July 2014-June 2015]*  
rushtera.com

I rewrote our most important feature: uploading. This project included using tools like RabbitMQ and Redis, tied together with Java 8. The final product was a resumable and concurrently chunked uploader that maintained folder tree structure.

## Essence

A perfectionist on all fronts, I'm interested in building excellent products. Not only should they provide a beautiful and intuitive experience for the user but they should also be horizontally scalable and highly available. I give +1s in code reviews to clean code.

## Technologies

- AWS
- Django
- Flask
- Google Cloud Platform (GAE, GKE)
- Heroku
- HTML 5
- JavaScript
- Laravel
- MySQL
- PHP 5.3+
- PostgreSQL
- Python 2.7, 3.6+

## Education

Cornell University *[2013-2014]*

University of San Francisco *[Fall 2017]*

## Volunteer

- Code2040 Mentor, 2017-ongoing
- DBSA SF Facilitator, 2017-2018
- Techtonica Mentor, 2018-ongoing
